

Guidelines – TSIT01 – 2021/HT2

- Some of the lectures in the course will be given in English since one of the lecturers (Guilherme) has limitations to teach in Swedish. However this should not be a major issue, since the examiner (Jan-Åke Larsson) is Swedish, and the report that will be handed in as part of the evaluation is to be submitted written in Swedish.
- The main communication channels will be the Lisam course room and email. Teams may also be used if you need to reach us. **This course will be given on campus.** You can see the corresponding room for each lecture in TimeEdit and in the front page of the Lisam course room.
- If you have any cold-like symptoms you should not come to the lecture. In order to minimize any problems with the fact you will not have watched one or more lectures, the videos from the lectures from last year will be available after each corresponding lecture. The content is roughly the same, so you will not be at a total loss if you miss a lecture. You may also use these videos to re-watch some of the course's content later on.
- These videos will be available on Microsoft Stream, which is part of Sharepoint, and accessed through the App menu (the button on the top left side) on Lisam. The name of the channel is TSIT01 2021 and can be watched by any student in the course (you need to login with your LiU-ID). For your convenience, the channel will also be embedded in the Lisam courseroom.
- The slides for each lecture will also be made available on Lisam (course documents).
- Instructions for the lab will be given in lecture 4. The lab does not start until the end of week 46. The lab is done fully online and individually.
- The lab can only be done when the course is running, there are no retakes for the lab. For the report there are retake opportunities, usually in April and August. Jan-Åke will give more details on the report on lecture 5.
- Technical questions on the lab are to be directed at Joakim Argillander (joakim.argillander@liu.se).
- Attendance to the laboration times on TimeEdit are not mandatory. They are only there so you can get assistance in the lab tasks if you need. Assistance is in Swedish.
- There will be one guest lecture given by a security consultants from industry. More details later.
- Check your LiU email regularly.
